# BRIDGE & HIGHWAY

## Bridge Overhang Brackets

EDC Bridge Overhang Brackets are designed for use on both steel and concrete beams. Both brackets feature versatile height adjustments to accommodate varying girder sizes.

### Standard HF-85 Bracket

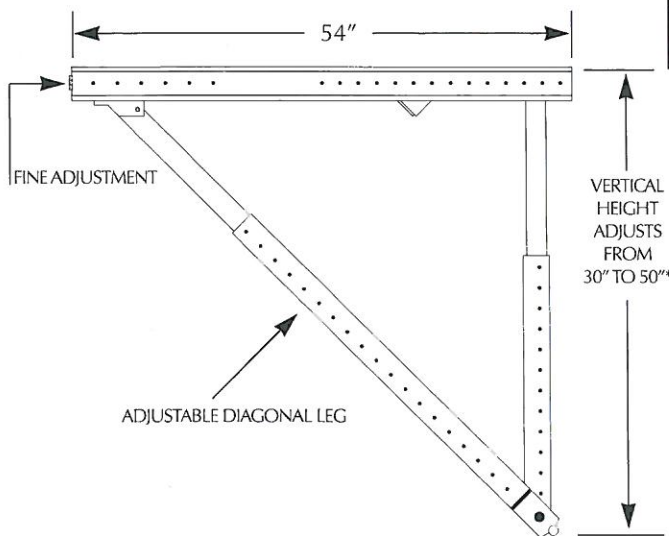

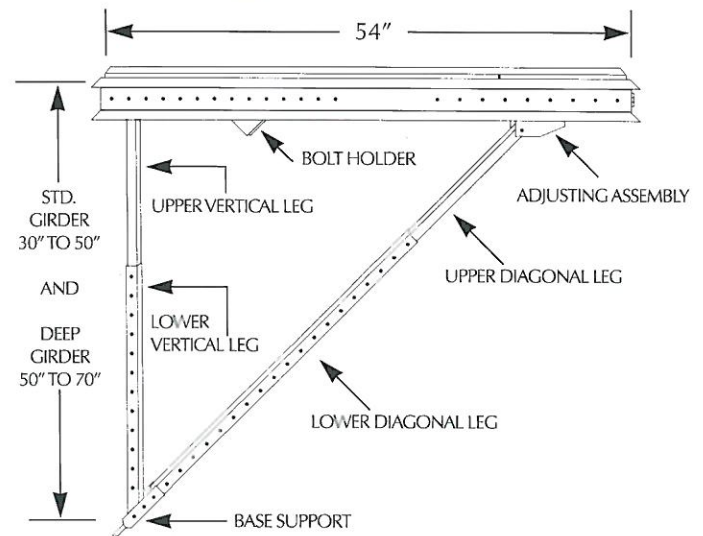

#### Features:

Square tubular steel for maximum strength to weight ratio.

Leg adjustment holes at 1" increments, to minimize final adjustment with outboard nut.

Adjustments may be made from above the deck, utilizing a unique adjusting screw mechanism.

Brackets ship pre-assembled to minimize labor hours.

### Versatile C-49 Bracket

#### Features:

Round tubular steel for maximum strength to weight ratio.

Aids in preventing the structural member from deforming during construction of the bridge deck.

Design allows for use on prestressed concrete beams without wood blocking.
